

Tripod heads for special applications

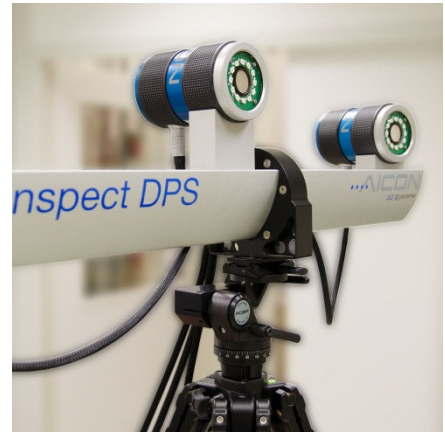

Measurement devices and sensors generally have the customary threads for attaching to a tripod head; either the larger 3/8" or the smaller 1/4" thread. However, there is always a need for other types of attachment. FOBA therefore offers a neutral quick-release plate that can be adapted to various requirements.

Neutral quick-release plate without bores and thread. This can be quickly and easily adapted to special requirements.

Example above: the quick-release plate adapted to customer wishes.

Dual tilting head ASMI A Q with special quick-release plate (two 3/8" screws) so that the camera bar doesn't twist (Photo: AICON 3D Systems).

Sometimes longer quick-release plates are necessary. These fit in the quick-release units BALSO and BALSJ from FOBA.

Ball head SUPERBALL BALLA with long quick-release plate.

The FOBA ball head SUPERBALL BALLO adapted to customer wishes (here with additional threaded bores on the top and bottom).

Because the SUPERBALL ball head from FOBA is very robust, it is used for all possible purposes.

Left: laser welding device mounted on an adapted FOBA SUPERBALL ball head. In contrast to the usual usage, the ball head is used here inversely, meaning that the base of the ball head is on top and the ball below.
